ST3
(please circle)

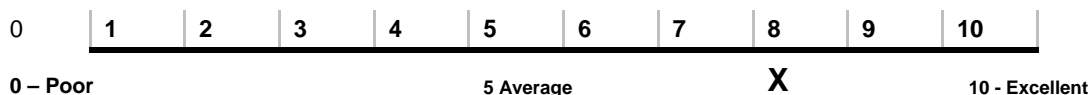

14 January 2010

Aims: / Objectives:

Neurology in Primary Care
Neurological Examinations
Neurological Symptoms
Discussion of Cases - Dr Mark Wilmot, Consultant Neurologist
MS & Parkinsons disease

Comments / Feedback

Very useful, enjoyed this thoroughly! Great patient presentation
Very good session. Very helpful. Especially Dr Wilmot and MS in afternoon.
Patient perspective very interesting and useful. Good review of neurological examination. Good case discussion.
Great to have specialist opinion in neurology as often difficult area for GPs. I enjoyed the patient perspectives on PD & MS. Good insight. Neuro exams a little quick and rushed, but good detail.
One of the most useful and informative days of VTS to date (from my 3 years). Guest speakers were very good and opened your eyes to how they cope with MS & PD.
Good exposure to personal experiences. Informative sessions.
Very good day. Good neurology consultant – aimed talk at our level and useful topics.
MS Nurses – good session, also useful to have real patients.
PD – good session. Would have been good to have Parkinson Nurse also.
Really usefully. Great to have patients presenting.
Session with Wilmot very good. PM sessions helpful from patient point of view. Useful run through of new exam.
Very good sessions. ‘Humanised’ the conditions (MS, PD) which are possibly the second most frustrating and challenging neurological conditions to treat/review as GP.
Very useful. Well organized.
Excellent day – good variety of neurological problems covered. I will remember to MS and PD sufferers I have met today and will use this knowledge to aid diagnosis and management of my future patients.
Very very useful and informative session with regards to use in primary car. Especially with the MS and Parkinsons.
Very useful sessions. Similar session recommended.
Good day. Excellent guest speaker. Please **handouts** a lot of information to take in.
Examinations – Very good. Could be improved by shrewd focused examination for specific topics.
Symptoms – Good cases and discussion. Would have been useful to role play these as consultations.
Dr Wilmot – Good explanation of cases.
MS Nurse – Excellent, good information on service access and new treatments.
PDs Limited value. Best aspect was patient view. Remainder of the talk was not tailored to the certain level of the audience.
