Diagnosis
Benefits of Early Diagnosis
Mental Capacity
NICE Guidelines
Typical GP referrals e.g. memory problems and behavioural issues
Available support for patients with dementia

Comments / Feedback

Very good. Very informative, was relevant to GP practice.
Good lecture but bit too long. Case based discussions would have been better.
Good Speaker. No cases presented which were interactive. No CBD. A little long but interesting enough.
Case based discussions would be helpful. Excellent over view. Lots of emphasis on treatments are more 2^o care which may not be relevant.
Good lecture from speaker, slightly long, maybe off topic occasionally.
Case based discussion may be better.
Good presentation – slightly long. Good content – relevant to GP at times.
Dementia an important topic – a good overview. May be add cases.

Name (Optional)
